

Development project of four (04) basins in the department of Podor

Intervention Zone

Regions of Saint Louis, Department of Dagana

Description of the Project

The project aims to develop 8,600 hectares of new land in the Podor department, with the overall objective of contributing to achieving food sovereignty by increasing the developed areas and improving the conditions for developing farms. This project is intended to be a strategic response to the food security challenges facing Senegal, by optimizing available natural resources and integrating modern agricultural practices. This includes creating favourable conditions for the installation and promotion of private irrigation, as well as establishing an environment conducive to sustainable development that could help to stem the rural exodus and illegal emigration. In addition, the project aims to optimise the operation of existing hydraulic structures and to enhance the value of available land, thus promoting the intensification and diversification of agricultural production. Improving the socio-economic environment of the targeted areas is also a priority, in order to combat poverty and underemployment. Finally, the project encourages the development of small and medium-sized enterprises, particularly in the areas of processing, conservation and marketing of agricultural products and by-products, by creating new employment opportunities and supporting local stakeholders.

- Improvement of the socio-economic environment of the project areas, contributing to the fight against poverty and

Project Leader

Impact Entity

- Creation of an environment conducive to sustainable development, capable of stopping rural exodus and illegal emigration.
