

Universal coverage of the territory through the use of satellite networks in white areas

Intervention Zone

The whole territory

Description of the Project

The **universal coverage project of the territory through the use of satellite networks in white areas** aims to provide reliable connectivity in remote areas or areas poorly served by traditional infrastructure. By using satellite solutions, this project helps to guarantee access to the Internet and telecommunications services for populations living in these areas, thus helping to reduce the digital divide, promote social and economic inclusion, and support sustainable development throughout the national territory.

Expected impact

- Universal coverage of the territory
- High-speed and very high-speed Internet access in rural and border areas
- Accessibility to quality Internet at low cost for populations
- Technically audit the coverage of the national telecommunications infrastructure;
- Assess the compliance of the infrastructure with international standards
- Identify the national coverage gap, particularly in rural and border areas
- Define the operational and economic model for the coverage of white areas
- Set up a secondary coverage network (e.g. satellite)
