

Program for the Promotion of Individual and Integrated Agricultural Farms (PROFII)

Intervention Zone

14 regions of Senegal

Description of the Project

Agriculture remains the sector with low productivity with only 3% of the exploited areas being irrigated, despite significant surface and groundwater potential. Indeed, the country has a potential in water resources estimated at nearly 35 billion m3/year, including 31 billion m3/year for surface water and 4 billion m3/year for groundwater. Despite the efforts made by the Government, the need for structuring infrastructure and modernization of agriculture remains significant to improve productivity and stimulate the private sector.

This is the whole meaning of the identification of this project which will focus on the development and enhancement of 10,000 farms of 1 to 2 ha: 9,800 integrated farms based on solar energy, 100 agricultural farms intended exclusively for the production of market garden seeds (pre-base and vitro-plants), and 100 nursery farms for the production of fruit plants. The overall objective is to promote the economic and sustainable integration of small producers (Farmers and Pastoralists) in the promising niches of agro-pastoral value chains through the establishment of modern individual and integrated agricultural farms,

Project Leader

Impact Entity

- Creation of 30,000 jobs in the agricultural sector
- Increase in annual income of producers

Ministry of Agriculture, Food Sovereignty and Livestock
