

## Fertilizer Plant Project: Urea, Organo -mineral Fertilizers

<b>Intervention Zone</b>	Thiès, Fatick and Saint Louis
<b>Description of the Project</b>	<p>Senegal, like other African countries, relies heavily on imports of chemical fertilizers to support its agricultural production. Thus, they reached a volume of 107,579 tons of fertilizers in 2022.</p> <p>The urea and fertilizer plant project could address this by developing local production capacity, which will improve soil fertility, increase agricultural yields and support food security.</p> <p>The implementation of this project requires the construction of (a) a plant for the production of urea from gas fields and (b) a complex NPK manufacturing plant from phosphoric acid.</p>
<b>Expected impact</b>	<ul style="list-style-type: none"> <li>▪ Increasing agricultural productivity through improved availability and access to fertilizers</li> <li>▪ Reduction of the national budget allocated to the acquisition of fertilizers</li> <li>▪ Development of a national, regional and international market for fertilizers</li> </ul>
