

Corn Program

Intervention Zone

The entire national territory

Description of the Project

Corn remains an important speculation for Senegalese households. However, local production is still not able to cover national demand (58% in 2021). This dependence also strongly affects the animal production sector, particularly poultry farming, which is vulnerable to the slightest shock on the external market.

The program therefore aims to put in place the conditions to ensure self-sufficiency in corn by 2029. To do this, it will be necessary

- to encourage private operators in the agribusiness and supply sector to invest in the development of the sector.
- at the production level, focus the strategy on identifying appropriate structures for the supply of inputs, financing the production of certified seeds, technical advice on production and crop management
- Strengthen research/development around the identification and execution of priority themes to sustainably achieve self-sufficiency in corn.
- better structure and guide public-private partnerships in the sector.

Project Leader

Expected impact Entity

- Increase in production and productivity of the corn sector
 - Implementation of a digital information platform
- Ministry of Agriculture, Food Sovereignty and Livestock
