

Project to connect irrigated areas to branch B of the emissary

Intervention Zone

Regions of Saint Louis, Department of Dagana

Description of the Project

The project aims to clean up 26,000 hectares of agricultural areas by connecting them to branch B of the Senegal River Delta emissary. Its overall objective is to significantly improve the operating conditions of irrigated areas, which will contribute to food self-sufficiency. As part of an approach to valorizing water resources and optimizing cultivated land, this project also aims to strengthen the resilience of farms in the face of climatic and economic challenges.

To achieve these objectives, the project focuses on increasing the areas under cultivation and improving yields through an efficient drainage system. At the same time, it aims to improve the socio-economic environment of the targeted areas in order to combat poverty and underemployment. Thus, the project will contribute to strengthening the country's food sovereignty while promoting sustainable and inclusive development.

Expected impact

- Improving drainage conditions in areas to optimize the use of agricultural land.
- Reclamation of salted or abandoned land, thus increasing cultivated areas and yields.
