

Strengthening network quality and performance and aligning with international standards (bandwidth, submarine cables, QoS , redundancy, security, etc.)

Intervention Zone

The whole territory

Description of the Project

Consists of modernizing telecommunications infrastructure to ensure reliable, fast and secure connectivity. It includes improving bandwidth, optimizing submarine cables, increasing network redundancy and security, and strengthening quality of service (QoS) . This strategic project aims to position Senegal to international standards, support digital transformation and meet the growing connectivity needs of citizens, businesses and administrations.

Expected impact

- Increase in Senegal's Internet capacity
- Improving the performance and security of domestic to international Internet traffic
- Development of the digital economy
- Reducing the cost of data for the private sector and populations
- Increasing Senegal's Internet capacity
- Significantly improve the performance of the country's Internet network
- Ensuring network security through redundancy of connection points
- Providing neighboring countries with high-performance Internet capacity
- Transform SENUM into an infrastructure operator within the framework of a public-private partnership (PPP)
